

G-WASH™

MARINE CLEANER

G-WASH® Marine Cleaner can be used both as a surface cleaning agent and an oil herding agent.

Surface Cleaning: Functions like a 'quick break' degreaser without forming a permanent emulsion.

Herding Agent: Applied to spill slicks as a spray. When applied to the centre of the spill, the oil will rapidly move (herd) outwards. Then, easily removed from the water with sorbents or skimmers.

GECKO®

www.geckocleantech.com.au

A powerful, safe, and effective oil spill clean up product and marine degreaser designed and listed for use in Australian marine environments.

- Maritime Safety Authority (AMSA) Listed
- Alternative to dispersion of oil into the water column
- Powerful Oil Separation Action
- Non-Toxic and Non-Hazardous
- Effective on Crude, Heavy, and Light Spills
- Non-Corrosive
- Bio-Based and Readily Biodegradable
- Cost Effective

HANDLING PRECAUTIONS

Keep out of reach of children. Slight eye irritant. Avoid contact with eyes. If eye contact occurs, immediately flush with water. If irritation persists, contact a physician. Use only as directed. Read and understand the label and SDS before using this product. Gecko® takes no responsibility for misuse or handling of the product.

APPLICATION

For surface cleaning dilute product between 1% and 10%. Small scale testing should be used to determine the optimum dilution rate prior to large-scale application. Apply diluted product directly to the contaminated surface through spraying or via saturated hydrophobic booms. For porous surfaces such as concrete, let dwell for 20-30 minutes, then remove oil using high-pressure spraying or manual agitation. Capture the oil using standard oil capture methods.

Dilution is not necessary for oil herding applications. Surround slick with sorbent booms prior to herding operation. Apply product to the centre of slick incrementally until all oil has been forced outwards. Oily booms may then be retrieved for disposal or recovery.

GECKO® CLEANTECH is a leading supplier of products for Spill Safety and Cleaning, such as sorbents, wiping cloths, bunding and dangerous goods storage equipment.
